SM24DP4XA Release Notes
Date: Jun.9 2020
Version: 7.10.2544

Overview

This release notes covers firmware version v7.10.2544 and MIB for SM24DP4XA

Release Changes and Enhancements

[New Features & Changes]
==
* Set the value of timeout WEB GUI

[Bugs Fixed]
==
* 10G: When switch port speed mode set to 10G FDX then use 10G(DAC-10G-SFP-01M) cable to connect other 10G switch port (10G FDX mode), the link will fail.
* VLAN: vlan membership information and selection are inconsistent on WEB and CLI.
* CLI: When idle time (auto logout time) is reached, Web page does not automatically go to login screen.
* Syslog: The first syslog sent by the switch is incorrect.
* TACACS: Set telnet auth method to tacacs, then login through telnet, the "show logging" still display local method.
* Web: After the user login and logout, the auto logout time does not return to default value (10min).
* CLI: Performing the "no hostname" command, the hostname does not restore to default.

Known Limitations and Restrictions
1- In order to use DHCP on the SM24DP4XA management port, the port need to be added to PVLAN 1.
2- On the SM24DP4XA, Rapid Ring roles cannot be returned to Disable using the Web GUI. The roles can be disabled using the CLI command interface.
3- Web timeout has issue with timeout set greater than 10 minutes.
